What is claimed is:

1. A method for installing a printer driver stored on a recording medium on a computer terminal comprising:

a step of referring regional information set in said computer terminal in advance;

a selection step of selecting one of the multiple printer drivers stored on said recording medium on the basis of the referred regional information; and

a step of installing the selected printer driver on the computer terminal.

2. The method of installation according to the claim 1 wherein said selection step comprising steps of:

referring to a table that correlates the regional information with addresses where each printer driver is stored; and

selecting one of the printer drivers by specifying an address corresponding to the regional information.

3. The method of installation according to the claim 1 wherein said regional information set in the computer terminal in advance includes information concerning languages set in the computer terminal.

4. A method for installing a printer driver stored on a recording medium on a computer terminal comprising:

a step of referring regional information set in said

computer terminal in advance;

a selection step of selecting a piece of setup information from multiple pieces of information stored on said recording medium on the basis of the referred regional information; and

a step of installing a control program contained in the printer driver and the selected piece of setup information on the computer terminal.

5. The method of installation according to the claim 4 wherein said selection step is executed by using a setup selection module contained in said control program.

6. The method of installation according to the claim 4 wherein said setup information includes language information used for displaying the status of printing conditions on a screen.

7. The method of installation according to the claim 4 wherein said setup information includes information on printing paper sizes to be used on the printer.

8. The method of installation according to the claim 4 wherein said setup information includes information on measurement unit systems to be used for setting up printing conditions and displays.

9. The method of installation according to the claim 4 wherein said selection step comprising steps of:

referring to a table that correlates the regional information with addresses where each piece of setup information is stored; and

selecting a piece of setup information from multiple pieces of information by specifying an address corresponding to the regional information.

10. The method of installation according to the claim 4 wherein said regional information set in the computer terminal in advance includes information concerning languages set in the computer terminal.

11. A computer readable medium storing multiple printer drivers and an installation program for installing one of said printer drivers to a computer terminal, wherein

said installation program causing a computer to execute a process comprising:

a step of referring regional information set in said computer terminal in advance;

a selection step of selecting one of the multiple printer drivers stored on said computer readable medium on the basis of the referred regional information; and

a step of installing the selected printer driver on the computer terminal.

12. A computer-readable medium according to the claim 11 further storing a table that correlates the regional

information with addresses where each printer driver is stored, wherein,

     said selection step selects one of the printer drivers by specifying an address corresponding to the regional information based on said table.

     13. A computer-readable medium storing a printer driver containing a control program and multiple pieces of setup information corresponding to each regional information, and an installation program for installing said printer driver to a computer terminal, wherein

     said installation program causing a computer to execute a process comprising;

     a step of referring regional information set up on said computer terminal in advance;

     a selection step of selecting a piece of setup information from multiple pieces of information stored on said computer-readable medium on the basis of the referred regional information; and

     a step of installing a control program contained in the printer driver and the selected piece of setup information on the computer terminal.

     14. The computer-readable medium according to the claim 13 wherein said selection step is executed by using a setup selection module contained in said control program.

15. The computer-readable medium according to the claim 13 wherein said setup information includes language information used for displaying the status of printing conditions on a screen.

5   16. The computer-readable medium according to the claim 13 wherein said setup information includes information on printing paper sizes to be used on the printer.

17. The computer-readable medium according to the claim 13 wherein said setup information includes information on

10   measurement unit systems to be used for setting up printing conditions and displays.

18. The computer-readable medium according to the claim 13 further storing a table that correlates the regional information with addresses where each setup information is

15   stored, wherein,

said selection step selects a piece of setup information by specifying an address corresponding to the regional information based on said table.
